

Designing Your Resume

What is a resume?

- A. One-page summary of work and educational achievements
- B. In-depth multi-page record of your full academic and professional history
- C. Letter to the hiring manager on why you would be the best fit for a job
- D. Your life story from kindergarten to now

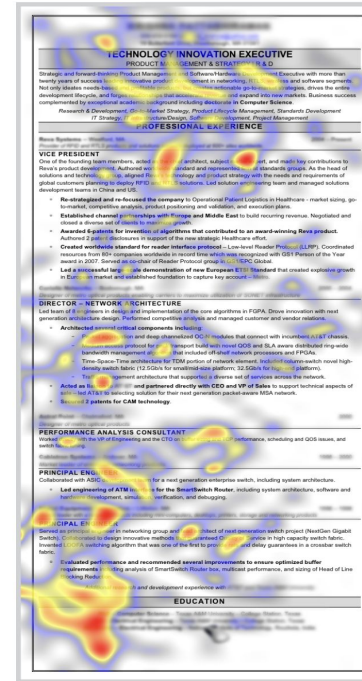

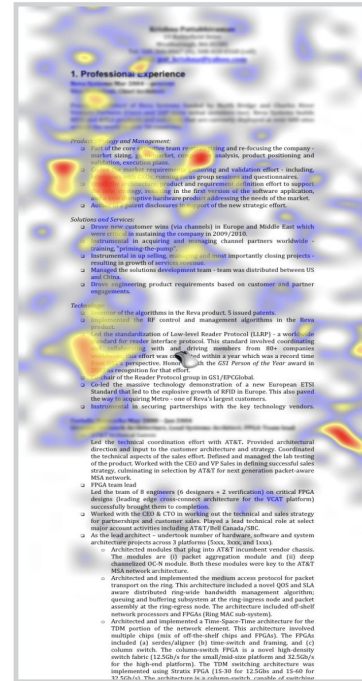

What is a resume?

- A. One-page summary of work and educational achievements 
- B. *In-depth multi-page record of your full academic and professional history*
*This is a **Curriculum Vitae (CV)***
- C. *Letter to the hiring manager on why you would be the best fit for a job*
*This is a **Cover Letter***
- D. Your life story from kindergarten to now
*This is your **autobiography***

Why a resume?

- Recruiters have very limited time to review each applicant
 - On initial review, recruiters only spend **6-8 seconds** looking at each resume – so optimizing your resume is important!
- Structured format with multiple sections
 - Not an essay / cover letter
- One page only – multiple pages are likely to be ignored
 - A “multi-page resume” is commonly referred to as a Curriculum Vitae (CV) and is common in academia

Creating a Resume

- A student resume should typically have these 5 sections:
 - Name / Header
 - Education
 - Skills
 - Experience
 - Projects

Header/Education

Creating a Resume: The Header

- Name
- Phone
 - You can omit phone number if you're posting your resume publicly (e.g. on a website) and not uploading it for a specific job
- Email
- City, State
- Website Links
 - Github
 - LinkedIn
 - Personal Website

✓ **Do:** Write website links out fully

John Doe

Your Location | youremail@yourdomain.com | 0541 999 99 99 | yourwebsite.com
linkedin.com/in/yourusername | github.com/yourusername

✗ **Don't:** Use only icons to link to websites

Alicia Bochnak

Poll: Do you have a LinkedIn?

Creating a Résumé: Education

Education

Borough of Manhattan Community College, AS in Computer Science

September 2023 - June 2025

- GPA: 3.5/4.0
- **Coursework:** Data Structures, Computer Architecture, Dynamic Programming, Software Development

- Institution Name
- Degree Type (e.g. A.S., B.S.)
- Major(s) and Minor(s)
- City, State location of your school
- Graduation Month, Year
 - *If you're not sure, you can write "expected graduation 20XX"*
- GPA
 - *include only if it's 3.5 or above*
- Relevant Coursework

Tips:

- Put coursework you're confident about - it may come up in a interview!
- Do not put high school in the education section, or only put it as a single line
- Add 4-year college when you are **admitted**

How to Describe BMCC Coursework on a Résumé

Skills

Writing About Skills

Hard (*Technical*) Skills

- Specific technical abilities you can be trained and tested on.
 - *JavaScript, PostgreSQL, C++, Java, AWS S3*
- These skills **should** be listed on your resume in a Skills section
- Skills are typically assessed through *technical* interviews

Soft (*Behavioral*) Skills

- How you work with people and manage yourself in the workplace
 - *Teamwork, adaptability, problem-solving, debugging*
- These skills **should not** be listed on your resume
- Showcase these skills in your *behavioral* interview
 - Use examples – don't just say things like "I'm good at debugging"

Creating a Résumé: Skills

Skills

Programming Languages: C++, Java, SQL, JavaScript, Python

Tools and Technologies: React, PostgreSQL, Figma, Git, Tableau, AWS

Separate technical skills into the following categories:

- Programming Languages
 - Used to write code
- Tools and Technologies
 - Tools used to build, run, deploy, or collaborate in the technical process
 - Libraries, frameworks, platform, cloud tools, databases, etc.

Tips:

- List skills you're confident about – they may be asked about in a behavioral or technical interview!
- Some companies focus on hiring candidates who are familiar with specific languages / technologies

Experience

Creating a Résumé: Experience

Software Engineer Intern, Sample Company – New York, NY

May 2025 - August 2025

- Built and maintained a platform in React for HR workflows and IT asset tracking on a 3-person team.
- Consolidated 500+ automated tests using Jest reducing failing tests by 10% and speeding build time by 2 minutes
- Created an end-to-end system for posting open positions, acquiring candidates, scheduling interview times, and onboarding to simplify student-hiring processes using MVC architecture with React, JavaScript, and Tailwind CSS.

- Job Title
- Company
- City, State
- Date Range
- *3-5 bullet points per experience*

What is Considered “Technical Experience”?

- Hands-on work building, analyzing, or managing software, systems, data, or hardware with **stakeholders**.
 - Previous Internships/Co-ops
 - Campus Jobs like IT helpdesk, web development, etc.
 - Freelancing
 - Research Assistant for a professor / lab
 - Teaching Assistant (TA) for technical courses
 - Technical Volunteer Work (e.g. building/maintaining a website for a nonprofit)
 - Clubs: Computer Science clubs, Robotics clubs, running hackathons, etc.

What about things you've built yourself?

- Experience doesn't *only* mean things you are paid for / that occur as part of school
 - Projects you've built which have users / are notable can be considered experience
 - e.g., creating a Discord bot with 100s of users, building a website with traction on social media
 - Making substantial contributions to open source projects
 - e.g., contributing multiple PRs to a project with 100s / 1000s of users
- **However**, if you have other things you are able to list as professional experience, omit these projects/contributions from the Experience section

How to write about your experience on a resume

The S.A.R. Framework:

Situation: Describe the **context** of the job in the first bullet point under each experience

- *Built and maintained a platform in React for HR workflows and IT asset tracking on a 3-person team.*

For each project or role, identify 2-4 **actions** you did and their **result**

- ***Consolidated** 500+ automated tests using Jest resulting in **higher test coverage***

Tip: Try to quantify results if possible and mention technologies used

- *Consolidated 500+ automated tests using **Jest** reducing failing tests by **10%***

Projects

Creating a Résumé: Projects

Georgia Healthcare Price Transparency Platform
github.com/name/repo

Spring 2025

- Built a Next.js and React application to display hospital procedure costs for the state of Georgia based on users' health insurance status or lack thereof, with a radius filter based on zip codes to find nearby hospitals.
- Designed and implemented price comparison features by procedure, location, and insurance type, using Node.JS
- Created wireframes in Figma and developed the front-end utilizing Ant Design Library and React to match the designed interface to the end result.

- Name
- Date
- Github repo / website (if possible)
- **1-3 bullet points per an experience**
 - *Context (what the project is)*
 - *Features you developed*
 - ***Highlight tech tools used***

What can be considered a Project?

- Hackathon projects
- Classwork
- Club leadership / activities
- Personal projects (on your Github)
- Bootcamp projects

Use the S.A.R. Framework for these as well!

Additional Tips

Do:

- Keep it to **one page**
- Use **bold**, *italics*, and underlines to highlight key elements (e.g. job titles), just be consistent
- Use the organized layout with these main sections:
 - Header & Contact
 - Education
 - Skills
 - Experience
 - *Projects - Limit the length of this section after you have full-time experience or multiple internships*

Don't:

- Put visual elements (e.g. pictures) as they distract from the content of the résumé
- Include more than basic colors (make sure it is legible when printed in black-and-white)
- Use personal pronouns like “I”, “me”, “myself”
- Include more than one sentence in bullet points
-

Group Activity

Break out into your project groups, and **write a section which could be included on your resume about your boot camp project, following the framework / format we just discussed:**

Project Title, Summer 2025

<link>

- * Bullet #1: Context** of what the project is / what it's solving
- * Bullet #2: Action** you did and its **Result**
- * Bullet #3: Action** you did and its **Result**
